NOTICE

D'Arcy Water System

To All D'Arcy Residents:

The D'Arcy Water System utilizes an untreated well water source. To ensure the system remains safe, and that the SLRD can continue to provide non-chlorinated water, the distribution system must undergo a routine chlorination treatment to disinfect the pipes. This will ensure the pipes are free of any algae growth and that the water supply remains safe to drink.

Disinfection with a regulated amount of high concentration chlorine will occur:

Monday, October 26, 2015

9 AM – 5 PM

The water system will be offline and it is very important that residents **do not use any water during this time.**

- The Chlorinated water will sit in the pipes for 2 hours and will then be flushed from the system through the lawn hydrants. The water will be de-chlorinated as it is flushed so there will be no damage to lawns, creeks or lake.
- Outdoor faucets at each residence will be turned on to pull chlorinated water through the service connection.
- After 5 PM, please run all inside taps for 5-10 minutes to flush remainder of chlorinated water through the interior pipes.
- You may notice a chlorine odour in your water for a couple of days but this odour will dissipate.

Please contact Ed Witwicki, Senior Engineering Technologist, at 604-894-6371 ext. 227, if you have any questions regarding this Notice.
